User Management Requirements

Platform user management

High-level requirements and discovery

Owner	Marilyn Rodriguez
Status	Draft for discovery
Audience	UX design, architecture, implementation team
Date	October 19, 2026
Legend	Green highlight marks changes and additions from review.

1. Context

S|2 runs on Duck Creek. User administration happens in a separate BHSI portal that connects to Duck Creek and to Auth0 (identity).

Broker organizations will bring hundreds to thousands of users (the Amwins list alone has 800+ people in several countries), so BHSI cannot create and maintain every account by hand.

The model is delegated administration. BHSI administrators onboard each brokerage, decide which roles that broker may use, and appoint its first Broker Admin.

The Broker Admin then invites and manages their own users. BHSI also uses the same module for internal users such as underwriters, whose roles are never available to brokers.

2. Roles

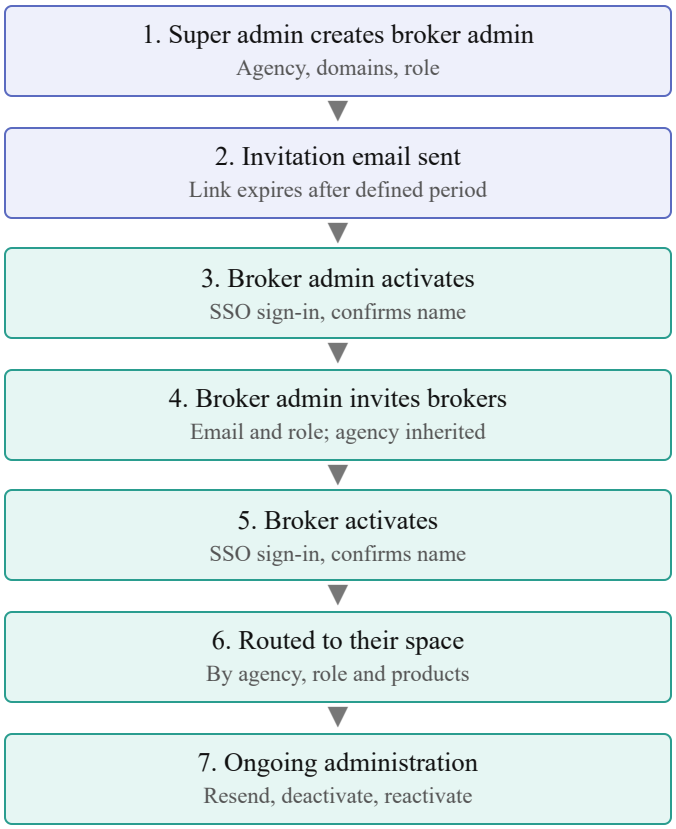

BHSI roles have visibility and authority over multiple brokers' spaces. Broker roles are limited to their own space.

Role	Organization	Authority
Portal super admin	BHSI	Creates Broker admin users, manages internal users, sees all agencies.
Underwriter, Underwriter Manager	BHSI	Internal roles. Never available to brokers.
Broker admin	Broker	Invites, deactivates, and reactivates users in their own space. Cannot create other Broker admins.
Broker	Broker	Added by the Broker admin. Has access to one space. Cannot add or remove other users.

Open question (Q1): Who appoints Broker admins: the BHSI security team or BHSI user admins?

3. Flow

1. Portal super admin creates the Broker admin: agency, accepted domains, email, and role.
2. The system sends the invitation email. The link expires after a defined period.
3. Broker admin activates: signs in with company SSO and confirms their name.
4. Broker admin invites brokers: email and role. Agency is inherited.
5. Broker activates: signs in with company SSO and confirms their name.
6. The system routes each user to their space based on agency, role, and products.
7. Ongoing administration: resend, deactivate, reactivate.

4. Requirements

A. Broker onboarding

- As a Portal super admin, I want to create Broker admin users linked to a Duck Creek entity/agency, so that they can manage their own users.
  - Ability to select an existing agency in Duck Creek.
  - Ability to determine accepted domains, e.g. @brokeragency.com
  - Ability to enter the email account.
  - Ability to choose the right role (Broker admin or Broker).
  - **Open question (Q2):** Number of active users available? Is there a limit per agency?
- As a system, I should link agencies' spaces/organizations to the products they write, so that users can only access those products.

B. Invitation and activation

- As a Broker admin, I want to receive an email with a link to the space, so that I can complete my user activation.
- As a Broker user, I want to receive an invite via email, so that I can activate my user and log in to the S|2 Portal.
- As a system, I should expire email invites after a defined period, to ensure security standards.
  - **Open question (Q5):** How long before email invites expire? 7 days?
  - Expired, reused, or invalid invitation links show a clear message and ask the user to contact their admin.
- As an admin, I want to resend expired invitations, so that I don't have to re-enter the same data.
- As a Broker admin or user, I want to log in to the portal using my work email via SSO, so that I don't have to set up a new password to use the platform.
  - Users sign in with their own organization's credentials through Auth0. No BHSI email is required.
- As a Broker admin or user, I want to enter/confirm my first and last name, so that all communications are addressed correctly.
- As a Broker admin or user, I want to be redirected to my workspace once I log in, so that I can start operating.
  - Space routing: the user never chooses where to go. After sign-in, the platform reads the user's organization and roles and opens the matching Duck Creek workspace.
  - Broker users: Duck Creek, scoped to their submissions and policies.
  - Internal users: Duck Creek underwriting workspace.
  - Admins: same landing as their Duck Creek role.
  - **Open question (Q6):** After login, do users land on the Portal home page or directly in their Duck Creek workspace?
- As a Broker admin or user, I want to navigate from the Portal to the S|2 platform seamlessly.

- As a Broker, I don't want to authenticate every time I navigate to the Portal or S|2.
  - Session should last for as long as the user is logged in to their agency account.
  - **Open question (Q4):** How is the session handled? How often do we check and expire sessions?

C. Inviting users

- As a Broker admin, I want the ability to invite broker users to my space/organization.
  - Enter email.
  - Select role.
  - **Open question (Q3):** Is there more than one type of broker role?
  - Agency/organization is inherited from the Broker admin.
  - Broker admins can only assign Broker roles. They cannot create Broker admins or assign internal roles.
- As a Broker admin, I want the process to add users to be quick and simple, as I have to invite hundreds of users during the onboarding process.

D. User list and statuses

- As a Portal super admin, I want to see a full list of users across all agencies and their relevant data:
  - Email
  - Full name
  - Agency
  - Role
  - Status
- As a Broker admin, I want to see a full list of my users and their relevant data:
  - Email
  - Full name
  - Role
  - Status
  - Broker admins only see users in their own agency. This is enforced by the system (API), not only hidden in the screen.
- As a Portal super admin, I want to know the status of each user, so that I can follow up on onboarding.
  - Invited: invitation sent but not yet accepted.
  - Active: user accepted the invite and accessed the platform for the first time.
  - Expired: invited, but not activated within the defined period.
  - Deactivated: done manually from the Portal by entitled users.
  - Setup incomplete: user created in Auth0 but Duck Creek setup failed.

E. User maintenance

- As a Broker, I want to be able to edit my first name, last name, and job title.
  - Email is never editable.
  - Users cannot change their own role.
- As a Portal super admin or Broker admin, I want the ability to deactivate users.
- As a Broker admin, I want to deactivate a user who has left, so that they can no longer reach S|2 or Duck Creek.
  - Deactivation requires confirmation and applies to the Portal, Auth0, and Duck Creek.
  - Access to the Portal, S|2, and Duck Creek ends within a defined time, even if the user is still signed in to their company account.
- As a Broker admin, I want to reactivate a previously deactivated user, so that a returning employee keeps their history instead of getting a new account.

F. Internal BHSI users

- As a BHSI underwriter, I should have access to the Portal if I have access to S|2.
  - Synchronization works both ways. BHSI users can be added directly in S|2 and will still have access to the Portal with their role entitlements.
  - **Open question (Q7):** Two-way sync: which system is the source of truth when a user is added or changed in S|2 vs. the Portal?

G. System rules

- As a system, I have to link Portal roles correctly to S|2 platform roles, so that authority is maintained and ensured.

Open questions

#	Question	Owner
Q1	Who appoints Broker admins: the BHSI security team or BHSI user admins?	Product, BHSI
Q2	Number of active users available? Is there a limit per agency?	Product
Q3	Is there more than one type of broker role?	Product, Amwins
Q4	How is the session handled? How often do we check and expire sessions?	Architect
Q5	How long before email invites expire? 7 days?	Product, Architect
Q6	After login, do users land on the Portal home page or directly in their Duck Creek workspace?	Product, UX
Q7	Two-way sync for internal users: which system is the source of truth when a user is added or changed in S|2 vs. the Portal?	Architect
